

**TGDC VVSG August 31, 2007 Errata – Important Corrections  
November 6, 2007**

**Part 1:**

1. Req. 3.2.5-C: Add “...while preserving the current votes.”
2. Req. 5.1.4-D: Remove “Embedded.”
3. Req. 5.3.1: Change “SHALL allow authenticated only” to “SHALL allow only authenticated.”
4. Section 6.4.1.7, the citations of endnotes [3] and [4] should instead be citing endnotes [4] and [5] respectively.
5. Section 7.7.5.1: the numbering of requirements is wrong and doesn't match the hyperlinks in the last paragraph before the requirements. The requirements should be numbered 7.7.5.1-A and 7.7.5.1-B, respectively.
6. Req. 7.7.5-H (alias 7.7.5.1-A) should read, "The detection of marginal marks from manually-marked paper ballots SHALL NOT show a bias." (The word NOT is missing.)

**Part 3:**

1. Req. 2.5.2-A: the source should be 2002 VSS I.9.6.2.2.a.
2. Req. 4.3-A: the citations of endnotes [13] and [14] should instead be citing endnotes [12] and [13] respectively.
3. Section 4.6: Paragraph 5 should be indented and is a quote from [Redmill88].
4. Req. 5.2.1.2-A: "need only consider" should be "need consider only." (As worded now, it may have the unintended consequence of allowing the normative text to be interpreted as, "may consider and then opt to ignore").
5. Table 5-1: The row for N = 250 is missing.

**Appendix A:**

1. Definition for voter-verifiable paper audit trail: Change “Voting system” to “DRE.”
2. Definition for white-box: The current definition duplicates black-box. Change to “Testing technique that examines the internals of a system, e.g., its application logic, to design tests. The tester must have programming skills to identify all paths through the application logic. White-box testing can discover extra non-specified functions that black-box testing would not know to look for and can exercise data paths that would not have been exercised by a fixed test suite. “

**Appendix B:**

1. There are two references identified as MS05. 1st instance is incorrect and should be “MISS06.” Requirements part1:7.7.4-B and part1:7.8.3.1-E should then reference “MISS06.”
2. NIST03 URL is broken – there is no replacement URL available at this time.
